Experiment 6: Library Book Issue System – Zoho Creator Command Center Page

Aim:

To design and build a single internal **Command Center** page in Zoho Creator for the **Library Book Issue System**, using page-builder elements to provide one workspace for monitoring book issues, checking availability, managing returns, and viewing library activity.

Page Elements Used

Page Element Type	Element Name
Panel	Library_Command_Center_Panel
Board	Book_Issue_Status_Board
Chart	Book_Circulation_Chart_Widget
Gauge	Book_Return_Target_Gauge
Search	Book_and_Member_Search_Bar
Form	Quick_Book_Issue_Form
Report	Book_Issue_Register_Report
Snippets	Book_Issue_Guidelines_Snippet
Button	Send_Return_Reminder_Button
Widgets	Library_Statistics_Widgets
Viewer	Book_Details_and_Issue_Policy_Viewer

Page Layout (Section-wise)

Section 1: Overview Strip

Book Return Target Gauge (Gauge element); Book Circulation Chart Widget (Chart element); Book and Member Search Bar (Search element).

Section 2: Issue and Return Workspace

Send Return Reminder Button (Button element); Book Issue Status Board (Board element), grouped by statuses such as Issued, Returned, Overdue, and Available where applicable.

Section 3: Detailed Data

Book Issue Register Report (Report element), showing issue ID, book title or ID, member name or ID, issue date, due date, return date, and current status.

Section 4: Reference and Quick Actions (Sidebar)

Book Issue Guidelines Snippet (Snippets element); Book Details and Issue Policy Viewer (Viewer element); Quick Book Issue Form (Form element, expandable tab) for recording a new issue.

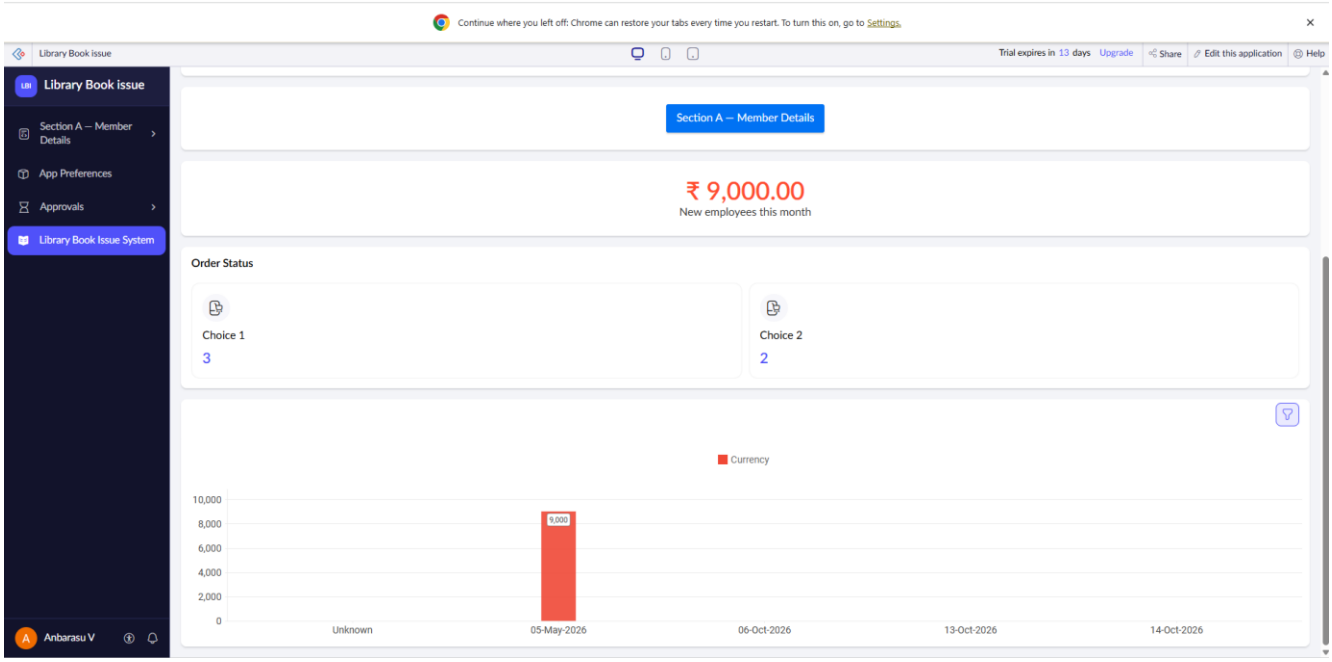

Section 5: Operations Strip

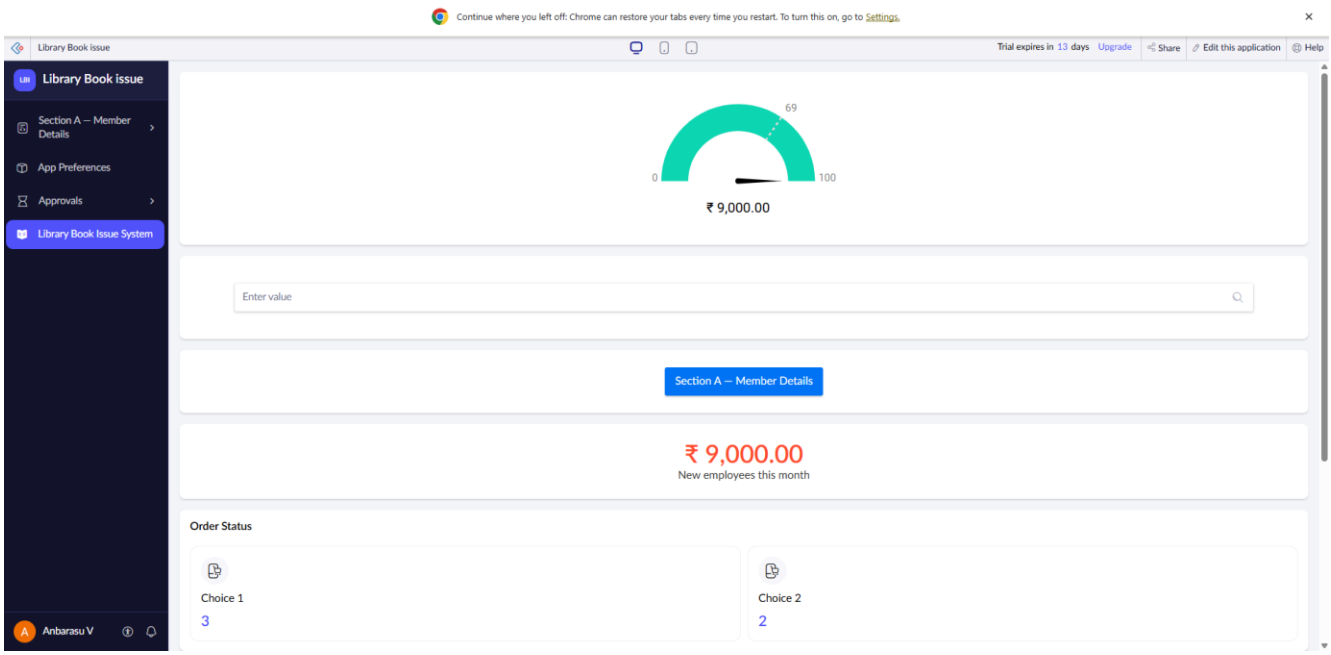

Library Statistics Widgets (Widgets element), showing configured metrics such as total books, currently issued books, returned books, and overdue records.

Implementation Notes

Place all sections inside Library_Command_Center_Panel. Configure each element to use the actual forms, reports, and fields available in the application. The return reminder button requires a configured action or workflow; the gauge and widgets require suitable metrics. If the application does not store a particular field, omit it or add the field before configuring the related element.

Screenshots

Result:

A Command Center page for the Library Book Issue System has been designed in Zoho Creator. The page layout brings together book issue status, circulation statistics, search, issue entry, reports, reference information, and return follow-up actions in one workspace. The elements should be configured and tested in Zoho Creator using the application's actual data and workflows.
