EXPERIMENT NO: 7

INTEGRATING ZOHO CREATOR WITH ZOHO CRM VIA CONNECTIONS AND APIs FOR A LIBRARY BOOK ISSUE SYSTEM

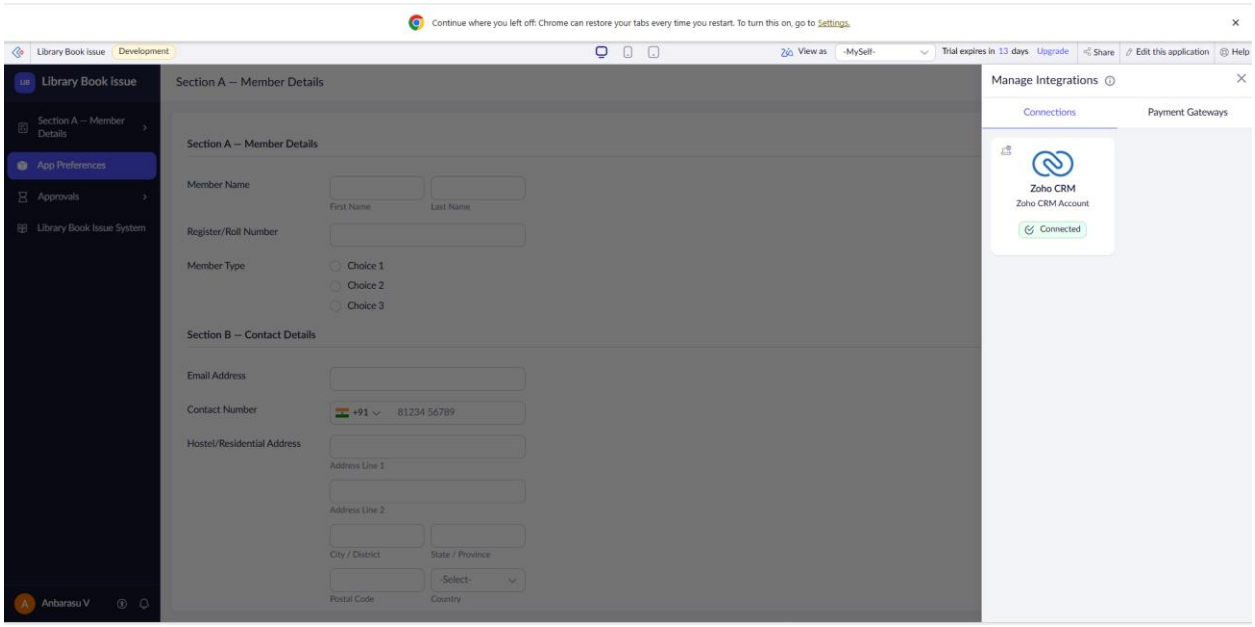

AIM

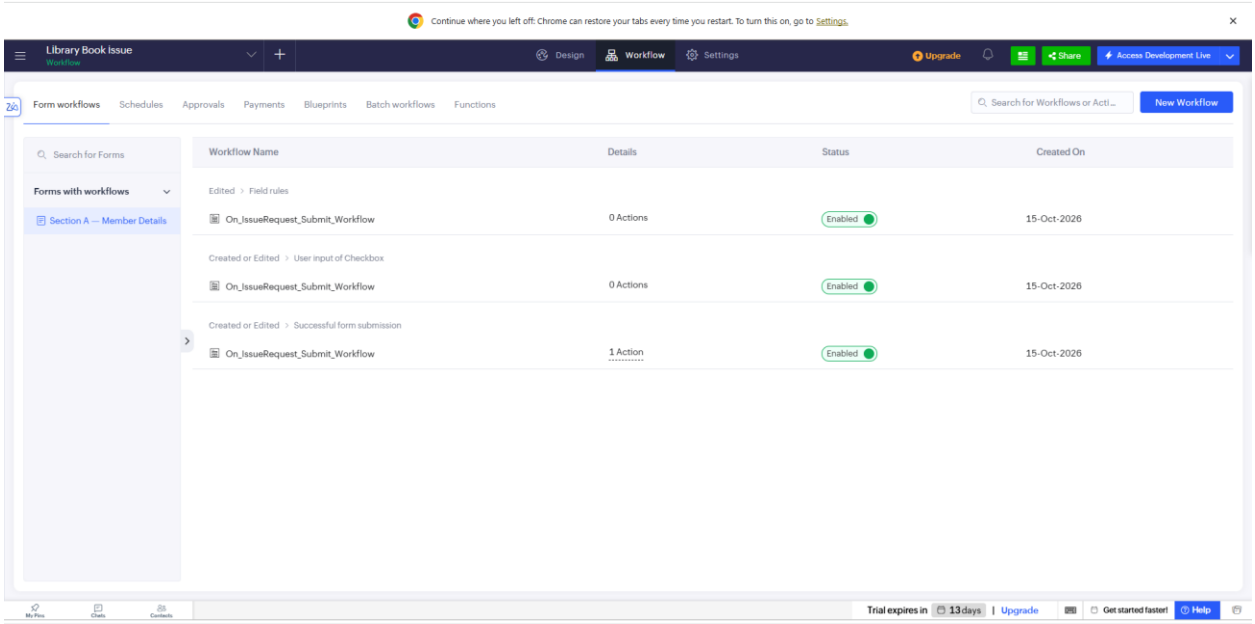

To design and integrate a Library Book Issue System in Zoho Creator with Zoho CRM using authenticated connections and workflow actions, so that book issue details can be synchronized with Zoho CRM after a successful form submission.

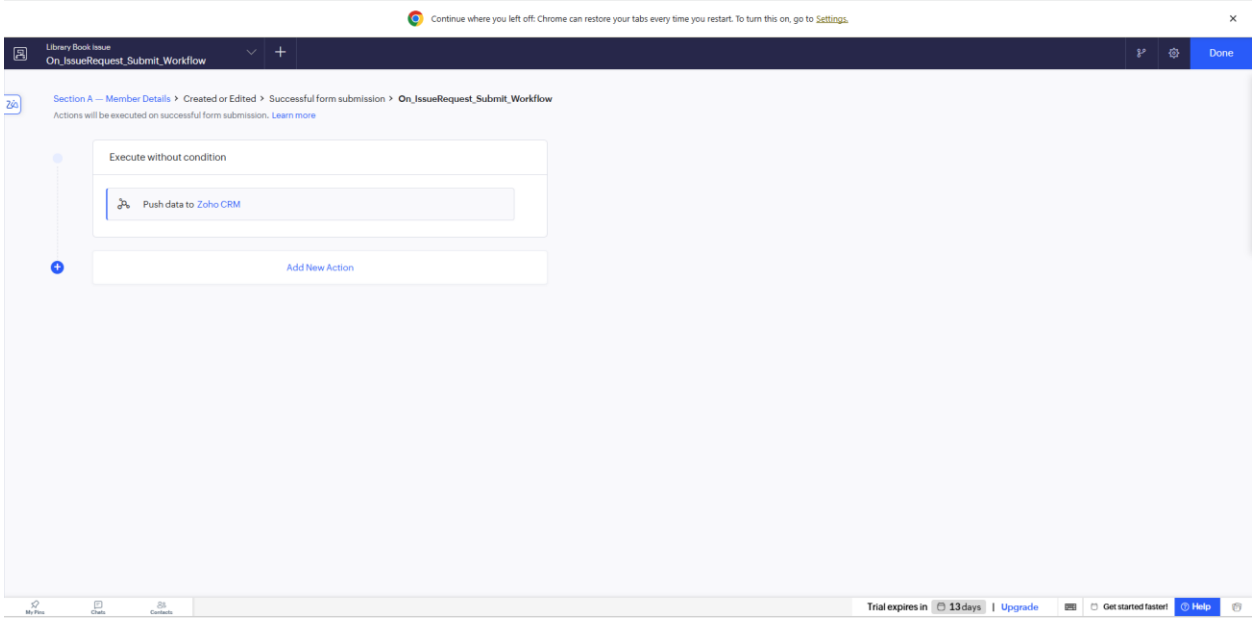

PROCEDURE

1. **Application Setup:** Log in to Zoho Creator and create a new application titled *Library Book Issue System*.
2. **Form Design:** Create a form named *Book_Issue_Form*. Add fields such as Member Name, Member ID, Email, Phone Number, Book Title, Book ID, Issue Date, Due Date, and Issue Status.
3. **Integration and Authentication:** Open App Settings or Connections in Zoho Creator. Choose Zoho CRM and configure an authenticated OAuth connection. Confirm that the connection is successfully connected.
4. **Workflow Configuration:** Open the Workflow section, select *Book_Issue_Form*, and create a workflow for the *Created* event after a successful form submission.
5. **Action Mapping:** Add a Zoho CRM integration action to create or update a suitable CRM record, mapping the relevant member and book issue fields to the corresponding CRM fields.
6. **Enable and Test:** Save and enable the workflow. Submit a sample book issue record and verify that the mapped details are sent to Zoho CRM.

SCREENSHOTS

RESULT

The Library Book Issue System form and workflow were configured in Zoho Creator for integration with Zoho CRM. When a book issue form is submitted, the enabled workflow can transfer the

mapped member and book issue details to the configured CRM module. The integration should be verified using a test submission and the corresponding CRM record.
